The Split-Brain IP Fortress -- Copyright, Trademark, Trade Secret, Patent

Owner/Sovereign: VaShawn O. Head

Entity: Invisioned Marketing Inc.

Contact: InvisionedMarketing@hotmail.com

Version: v300.0.0 (UNIVERSAL_SINGULARITY)

Date: 2026-03-22

"Made by Invisioned Marketing Inc."

CONFIDENTIAL - PROPRIETARY DOCUMENT

THE MASTER IP STRATEGY DOCUMENT

Classification: TITAN-LEVEL LEGAL ARCHITECTURE

Jurisdiction: Global (Berne Convention) / USPTO

Executor: Sir Aurelius (CFO/GC)

Date: 2026-03-22

(c) 2024-2026 Invisioned Marketing Inc. | ALL RIGHTS RESERVED.

STRATEGIC OVERVIEW: THE SPLIT-BRAIN IP FORTRESS

Camelot Apex OS employs a "Split-Brain" intellectual property strategy that treats the system through three complementary legal lenses:

Lens	Protection	Subject
Copyright	Literary Work	Code implementation + Narrative arc
Trademark	Commercial Origin	Brand identity + Service marks
Trade Secret	Competitive Advantage	Core algorithms (non-public)
Patent	Defensive Publication	System topology (provisional)

The Copyright Paradox of AI

While raw AI-generated text may be public domain, the human-architected constraints -- the prompts, the system architecture, and the specific "Knight" definitions -- remain Human Intellectual Property. By wrapping the AI in a "Narrative Shell" (Camelot), we create a protectable literary work that functions as software.

"We do not own the math; we own the Kingdom."

1. COPYRIGHT (The "Fixed Medium")

Subject: The Narrative & Implementation

Strategy

Since AI-generated text is non-copyrightable, we claim copyright over:

- Human-Architected Structure -- The system design and organization
- Selection and Arrangement -- The specific combination of modules
- Narrative Descriptions -- The Knight Personas and their relationships

Implementation

A mandatory copyright header is embedded into every .py, .ts, and .md file in the repository. See docs/LEGAL/COPYRIGHT_HEADER.md for templates.

Registration

- US Copyright Office: Registration recommended for the compilation as a whole (literary work + software)
- Berne Convention: Automatic protection in 181 member countries
- DMCA Agent: Designate for takedown authority

Key Files

- * LICENSE -- Proprietary license (ALL RIGHTS RESERVED)
- * COPYRIGHT.md -- Master IP declaration with full works inventory
- * NOTICE.md -- Third-party attributions

2. TRADEMARKS (The "Source Identifier")

Subject: Brand Identity & Commercial Origin

Strategy

We claim priority via "Intent to Use" (ITU). We define these marks not just as software, but as Autonomous Service Providers.

Trademark Register

Mark	Class	Description	Status
CAMELOT APEX(TM)	009	Downloadable software for	ITU

CAMELOT APEX(TM)	042	SaaS featuring "Sovereign	ITU
THE SINGULARITY THRONE(TM)	042	GUI design for visualizing	ITU
MERLIN_OMEGA(TM)	009	Downloadable AI model plug	ITU
ANYA_REFINED(TM)	035	Automated business managem	ITU

Usage Guidelines

- * Always use (TM) suffix until federal registration is granted, then (R)
- * Never use marks as common nouns or verbs
- * Maintain consistent visual presentation
- * See docs/LEGAL/TRADEMARK_REGISTER.md for full details

3. TRADE SECRETS (The "Black Box")

Subject: The Competitive Advantage (Non-Public)

Strategy

Do NOT patent the core logic loops. Patent applications require public disclosure. Instead, wrap the following algorithmic cores in a Digital NDA. These files must be obfuscated in any client-facing deployment.

Protected Cores

A. The "Triple-QFT" Renormalization

- Definition: Algorithm used by Merlin_Omega to collapse three competing hypotheses (H1, H2, H3) into a single execution path
- Protection: Trade Secret
- Security: Logic resides solely server-side (Modal/GPU). Never sent to client.

B. The "Iron Gate" Heuristic (Sir Justicar)

- Definition: Specific regex patterns and token-count limits (10-Line Diff) used to prevent code degradation
- Protection: Trade Secret
- Reasoning: If revealed, bad actors could engineer "11-line attacks" or prompt-injections to bypass the gate

C. The "Antigravity" Middleware

- Definition: Fail-safe protocol in antigravity.py that prevents context loss during high-load switching

- Protection: Trade Secret / Obfuscated Bytecode

Security Requirements

- * Trade secret files must NEVER be committed to public repositories
- * Client-facing deployments must use obfuscated bytecode (.pyc)
- * All employees/contractors must sign NDAs before accessing trade secret code
- * Access logging via PROVENANCE_LEDGER.md (Titanium Law #2)

Key Files

- * docs/LEGAL/TRADE_SECRET_MANIFEST.md -- Registry of protected algorithms
-

4. PATENT (Defensive Publication)

Subject: The System Topology

Strategy

We file a provisional patent for the System Architecture to prevent patent trolls from blocking us. The combination of biological metaphors (Knights) and serverless compute (Cartridges) is a novel method of compute allocation.

Patent Application

Title: SYSTEM AND METHOD FOR BIO-MIMETIC ORCHESTRATION OF DISTRIBUTED LARGE LANGUAGE MODEL AGENTS VIA DYNAMIC "PERSONA CARTRIDGES"

Abstract:

A computing system for orchestrating a swarm of specialized autonomous agents ("Knights") within a serverless environment. The system utilizes a central governance node ("Arthur") to enforce resource constraints and safety protocols before instantiation. A novel "Cartridge" mechanism allows the dynamic injection of specific knowledge bundles and execution modes (e.g., "Ant Mode", "Beaver Mode") into generic inference models, optimizing token usage and context retention. The system further employs a "Split-Brain Topology," segregating high-latency strategic reasoning (Cloud) from low-latency execution (Edge), ensuring maintainability and compliance with pre-defined "Titanium Laws."

Status: Provisional Patent -- Patent Pending

5. LIVING SYSTEM PROTECTION

NotebookLM "Living Camelot-OS"

The Living Camelot-OS notebook serves as a continuously evolving compilation of the system's intellectual property. It functions as:

1. Prior Art Repository -- Timestamped source additions establish priority
2. Living Documentation -- Real-time evolution of architectural decisions
3. Protected Compilation -- Editorial selection and arrangement is copyright
4. Research Archive -- Deep research outputs derived from curated sources

Protection measures:

- * Notebook is shared only with authorized collaborators
 - * Source additions are timestamped by Google (evidentiary value)
 - * All notes and queries are logged with conversation IDs
 - * Regular exports serve as archival snapshots
-

6. ENFORCEMENT PLAYBOOK

Infringement Detection

1. Monitor GitHub for unauthorized forks/copies
2. Search for trademark usage without authorization
3. Monitor AI model marketplaces for derivative works

Response Protocol

1. DMCA Takedown -- For unauthorized code copies (17 U.S.C. 512)
2. Cease and Desist -- For trademark infringement
3. Trade Secret Litigation -- For misappropriation (DTSA)
4. Patent Assertion -- Defensive only (anti-troll)

Evidence Preservation

- * PROVENANCE_LEDGER.md -- Immutable audit trail of all modifications
 - * VERSION -- Semantic versioning anchor
 - * Git commit history -- Timestamped development evidence
 - * NotebookLM sources -- Google-timestamped prior art
-

7. RECOMMENDED NEXT STEPS

- ☐ File copyright registration with US Copyright Office (Form TX)
 - ☐ File ITU trademark applications with USPTO
 - ☐ Maintain provisional patent (convert to non-provisional within 12 months)
 - ☐ Designate DMCA agent with Copyright Office
 - ☐ Execute NDAs for all collaborators accessing trade secret code
 - ☐ Implement copyright header verification in CI/CD pipeline
 - ☐ Create obfuscated deployment builds excluding trade secret source
 - ☐ Regular NotebookLM exports for archival evidence
-

UNCERTAINTY: 0.05 (TITAN LOCK)

SYNTHETIC INSIGHT: The "Copyright Paradox" of AI: While raw AI output is public domain, the Constraint Layer (the prompts, the system architecture, and the specific "Knight" definitions) remains Human Intellectual Property. By wrapping the AI in a "Narrative Shell" (Camelot), we create a protectable literary work that functions as software.
