User

Provide all necessary documentation for the Copyright of Camelot-OS and Living Camelot-OS

Model

The intellectual property and copyright documentation for the Camelot-OS ecosystem is governed by the **Master IP Strategy Document**, which utilizes a "Split-Brain" approach to IP: Code is treated as literary (Copyright), Brand as commercial (Trademark), and Logic as alchemical (Trade Secret) [Source: 1: Untitled document.pdf] .

1. The Copyright Header (The "Fixed Medium") Because raw AI-generated text cannot be copyrighted, the strategy explicitly claims copyright over the **Human-Architected Structure, the Selection and Arrangement of modules, and the Narrative Descriptions (The Knight Personas)** [Source: 1: Untitled document.pdf] . The following header must be inserted into every `.py` , `.ts` , and `.md` file in the repository:

- `CAMELOT_APEX v100.0 :: THE SINGULARITY THRONE` [Source: 1: Untitled document.pdf]
- `(c) 2024-2026 Invisioned Marketing inc. | ALL RIGHTS RESERVED.` [Source: 2: Untitled document.pdf]

- **NOTICE OF PROPRIETARY HIERARCHY:**

1. **NARRATIVE ARCHITECTURE:** Character names (e.g., "Merlin_Ω", "Sir Kinetic"), relationships, and role descriptions are protected creative works and distinct intellectual property of Invisioned Marketing inc. [Source: 2: Untitled document.pdf] .
2. **STRUCTURAL ARRANGEMENT:** The specific organization of the agentic swarm, including the "Split-Brain Topology" and "Knight/Cartridge" modularity, constitutes a unique selection and arrangement protected under US Copyright Law [Source: 2: Untitled document.pdf] .
3. **UNAUTHORIZED REPLICATION** of the "Titanium Laws" or "Antigravity" logic sequences for commercial competition is strictly prohibited [Source: 2: Untitled document.pdf] .

2. The Trademark Ledger (The "Source Identifier") Brand identity and commercial origin are protected via "Intent to Use" (ITU) filings, defining the marks not just as software, but as Autonomous Service Providers [Source: 2: Untitled document.pdf] . The protected marks include:

- **CAMELOT APEX™** (Classes 009 & 042) [Source: 2: Untitled document.pdf] .
- **THE SINGULARITY THRONE™** (Class 042) [Source: 2: Untitled document.pdf] .
- **MERLIN_Ω™** (Class 009) [Source: 2: Untitled document.pdf] .
- **ANYA_REFINED™** (Class 035) [Source: 2: Untitled document.pdf] .

3. The Trade Secret Vault (The "Black Box") Core logic loops are deliberately not patented to avoid public disclosure; instead, they are protected as Trade Secrets and wrapped in a Digital NDA [Source: 2: Untitled document.pdf] . These include:

- **The "Triple-QFT" Renormalization:** The algorithm used by Merlin to collapse competing hypotheses. It resides solely on the Server-Side and is never sent to the client [Source: 2: Untitled document.pdf] [Source: 3: Untitled document.pdf] .
- **The "Iron Gate" Heuristic:** The specific regex patterns and token-count limits (10-Line Diff) used to prevent code degradation [Source: 3: Untitled document.pdf] .
- **The "Antigravity" Middleware:** The fail-safe protocol protecting against context loss, safeguarded via Trade Secret or Obfuscated Bytecode [Source: 3: Untitled document.pdf] .

4. The Patent Abstract (Defensive Publication) To prevent patent trolls from blocking the system, a provisional patent is filed for the System Topology. It argues that the combination of biological metaphors (Knights) and serverless compute (Cartridges) is a

novel method of compute allocation [Source: 4: Untitled document.pdf] . The title of this patent is:

- **"SYSTEM AND METHOD FOR BIO-MIMETIC ORCHESTRATION OF DISTRIBUTED LARGE LANGUAGE MODEL AGENTS VIA DYNAMIC 'PERSONA CARTRIDGES'"**

[Source: 4: Untitled document.pdf] .

(Note: While the sources explicitly outline the overarching IP protections for the Camelot-OS architecture created by Invisioned Marketing inc., they do not provide a separate, distinct copyright document exclusively for "Living Camelot-OS". Instead, the "Living" NotebookLM deployments are governed by this same master architectural framework and Narrative Shell [Source: 2: Untitled document.pdf] [more_horiz](#).)
