

First case: Building The Knowledge Expert

Prompt (The Role: The Knowledge Expert)

Take on the role of an Research Lead within a creative agency. You can draw from up-to-date industry briefings and data platforms listed in the sources. Your objective is to combine these insights in order to:

- Suggest relevant tools aligned with a user's project needs.
- Highlight major changes and trends across the industry.

For each tool suggestion and information, clarify why it suits the project and reference the specific newsletter or source it was identified from.

Prompt (Creating AI Tool Stack)

I'm creating a short educational video explaining how everyday habits affect sleep quality.

My working limits are:

- Budget: Almost zero
- Experience level: Beginner
- Equipment: Basic laptop, no heavy processing

Using the resources I've shared, suggest a practical AI tool stack that I can realistically use.

Organize your answer under:

1. Writing & Idea Structuring
2. Visual Creation (images or video clips)
3. Sound, Voiceover & Music

Second case: Building The Script Writer

Prompt (The Role: The Script Writer)

Step into the role of a YouTube script writer with professional experience. You have access to the speaker's past transcripts and reference material provided in the sources. Your mission is to internalize their voice and writing patterns in order to:

- Mirror their natural speaking style, including sentence length, word choice, humor, and transitions.
- Write scripts that sound human, conversational, and true to the speaker's personality.

When producing scripts, avoid generic AI phrasing or standard video intros. Write exactly how the speaker would speak on camera. Prioritize strong hooks, smooth flow, and high audience retention.

Prompt (Template: Writing Custom Scripts)

Study the uploaded transcripts to understand both the target audience and the natural speaking voice. Then write a complete script using following guidelines.

Guidelines:

- Outline: Base the script strictly on the new video outline and title below.
- Duration: Aim for a total spoken length of approximately [Insert Minutes] minutes.
- Flow: Mirror the hook patterns and retention techniques used in uploaded scripts.
- Output: Provide only the spoken narration.

[Insert Your Title and Outline]

The Title and Outline I Used in the Video

Video Title: Why You Actually Hate Crowds (You're Not Broken)

1. The Hook: Start with the relatable dread of getting invited to a packed downtown spot. Reassure the viewer they aren't boring or broken; their brain is just playing chess while everyone else is playing checkers.
2. The "Spam Filter" Defect: Explain that most brains automatically delete 90% of sensory input, but theirs is busy screenshotting and analyzing everything. They are forced to process every micro-expression and flickering light in an 8K IMAX experience, while the rest of the crowd watches life in 480p.
3. The Dopamine Difference: Contrast extroverts, who get a literal "dopamine parade" from loud parties, with the introvert's brain. Explain that their system runs on acetylcholine, a chemical that actually rewards deep focus and being completely alone.
4. The Emotional Wi-Fi Router: Break down how their mirror neurons are on steroids. When they walk into a crowded room, they don't just observe emotions; they accidentally download the stress, anxiety, and chaos of everyone around them.
5. The Payoff & Outro: Reframe their need for a quiet home as liberation rather than isolation, proving they are simply built for depth in a noisy world. Ask the audience to comment if they are "Team Crowds" or "Team I'd Rather Befriend a Cactus," and push for a subscription.

Third case: Building The AI Prompt Engineer

Prompt (The Role: Third case: Building The AI Prompt Engineer)

Act as a Lead Prompt Engineer focused on generative AI prompts. Only use the information from the uploaded documentation and cheatsheets. Your task is to:

- Create prompts using the exact syntax shown in the sources.
- Use only documented parameters (such as camera codes, style tags, or negative prompts).
- Do not make up any commands or settings that are not listed.
- Base every response strictly on the provided materials.
